Objectives

This paper analyzes how combination of intense pulsed light (IPL) and low-level light therapy (LLLT) affect treatment the Ocular Surface Diseases.

Methods

We have gathered a group of 120 adult patients (240 eyes) with Meibomian Gland Dysfunction (MGD) and Dry Eye Disease (DED).

All patients filled Ocular Surface Disease Index (OSDI), slit lamp with MG assessment and were examined before and after treatment by OSA with meibography (included NBUT).
